The MODEL-med
Charlie and his Mum
Obstetric Trainer

The MODEL-med Charlie and his Mum Obstetric Trainer is designed specifically for medical practitioners to assess cervical dilatation and fetal presentation.

The user simply places the cervix over Charlie's head and then stretches it until the desired dilation is achieved.

After lubricating the cervix with a water-based surgical lubricant the head can then be inserted into the opening at the back of the model.

Using this method the user can have any fetal presentation and cervical dilatation they wish.

The MODEL-med Charlie and his Mum Obstetric Trainer comes with three cervixes, which are, from left to right, primipara, multipara, and oedematous.
