

## placenta, uterus, and post-partum haemorrhage uterus

The MODEL-med Sophie and her Mum Full Birth Obstetric Trainer also has add-ons available that increase her usefulness.

A placenta and post partum uterus can be purchased separately that allow manual removal of the placenta to be simulated. In addition a post-partum haemorrhage uterus is available separately that allows the user to simulate bleeding after birth. This is used with MODEL-med's own blood, which is non-toxic, and washes out of cloth.

## durable

The MODEL-med Sophie and her Mum Full Birth Obstetric Trainer is made of a very soft, highly elastic, and very durable material.

## easy to clean

It is easy to clean, and following simple maintenance instructions ensures the models will last a long time.

## easy to repair

They are also easy to repair if they are accidentally damaged. The MODEL-med Sophie and her Mum Full Birth Obstetric Trainer comes with a one year warranty.

The MODEL-med  
Sophie and her Mum  
Full Birth Obstetric Trainer

## cephalic birth

The MODEL-med Sophie and her Mum Full Birth Obstetric Trainer is designed for the simulation of cephalic birth, breech birth, and shoulder dystocia. It is made from a highly realistic flesh-like material that creates an extremely realistic tactile experience when simulating birth.

As with all MODEL-med products, the models require generous lubrication with water-based lubricants. Your distributor can supply or recommend such a lubricant.

You will note that the vagina is a realistic size but stretches to accommodate the fetus, with a very lifelike stretching of the perineum.

When using The MODEL-med Sophie and her Mum Full Birth Obstetric Trainer you will usually have two practitioners operating the model. One will be pushing the fetus through Sophie's Mum's birth canal, while the other will be delivering Sophie.

## breech

The Sophie fetus has a full metal skeleton that provides durability and allows her to move realistically when practicing manoeuvres such as the nuchal arm.
